

Ali Molavi

✉ alixmolavi@gmail.com | 📍 Tehran, Iran

SUMMARY

Senior Software Engineer with 6+ years of experience building **distributed, event-driven backend systems**. Strong in **TypeScript/Node.js, Python/Django/Airflow, Java/Spring Boot, Kafka, Temporal, PostgreSQL, MongoDB, Redis, Elasticsearch, AWS, and Kubernetes**, with a focus on scalability, reliability, performance, data consistency, observability, and production operations.

EXPERIENCE

Zebline

Feb. 2026 – Present

Software Engineer

Tehran, Iran

- **Contributed to the evolution of a distributed, multi-tenant microservice platform** using Node.js/TypeScript, Python/Django/Airflow, Java/Spring Boot, Kafka, Temporal, Redis, CockroachDB/PostgreSQL, Elasticsearch, Docker, and Kubernetes.
- **Improved system reliability and data consistency** through transactional messaging, idempotent processing, replay and reconciliation, failure isolation, schema evolution, and safe progressive rollouts.
- **Optimized performance and scalability** across Kafka pipelines, asynchronous workflows, databases, caches, and background workers using batching, backpressure, concurrency controls, connection pooling, and distributed coordination.
- **Raised engineering and operational standards across the team** through automated migrations, integration and load testing, CI/CD release gates, OpenTelemetry observability, structured logging, graceful shutdown, and recovery runbooks.

GeoVision

Sep. 2023 – Feb. 2026

Software Engineer

Remote | Bern, Switzerland

- **Designed scalable Node.js/TypeScript services and APIs** for high-volume 3D and geospatial processing, including reliable real-time data workflows.
- **Operated AWS infrastructure and containerized workloads on EKS** using Docker, Kubernetes, and CI/CD, improving deployment consistency, availability, and fault tolerance.
- **Led performance and reliability improvements** through profiling, workflow optimization, observability, and system hardening under heavy workloads.

Seeq

Oct. 2022 – Sep. 2023

Full-Stack Developer

Remote | San Francisco, CA

- **Developed data-intensive React/TypeScript interfaces** and interactive time-series visualizations for an industrial analytics platform.
- **Improved rendering performance, state management, and maintainability** through profiling, component refactoring, unit and integration tests, and cross-functional design reviews.

Lingoberry

Aug. 2020 – Oct. 2022

Software Engineering Intern

Tehran, Iran

- **Delivered full-stack production features** using Next.js, React, TypeScript, NestJS, GraphQL, PostgreSQL, MongoDB, and JWT/Passport authentication.
- **Designed GraphQL APIs, relational and document data models, validation, and client-state flows;** strengthened delivery through testing, debugging, code reviews, and Git-based collaboration.

EDUCATION

University of Tehran

Sep. 2019 – Feb. 2022

Mechanical Engineering

No degree

SKILLS

Languages : TypeScript, JavaScript, Python, Java, SQL

Backend / Distributed Systems : Node.js, NestJS, Django, Spring Boot, Kafka, Temporal, Airflow, REST, GraphQL

Data : PostgreSQL, CockroachDB, MongoDB, Redis, Elasticsearch

Cloud / DevOps : AWS (EKS, EC2, S3, Lambda), Docker, Kubernetes, GitLab CI/CD, OpenTelemetry
