SUMMARY

Software Engineer with 5+ years of experience specializing in **scalable backend services** and **3D visualization and geospatial data systems**. Proven track record of delivering high-impact features for international teams using the **TypeScript ecosystem** and **AWS**.

EXPERIENCE

GeoVision

Software Engineer

Sep. 2023 – Present
Remote | Bern, Switzerland

- **Architected and developed scalable backend services** for high-volume 3D and geospatial data processing, delivering reliable APIs and real-time data workflows.
- **Designed and operated cloud infrastructure on AWS**, including compute, networking, storage, and deployment automation, improving system availability, fault tolerance, and operational scalability.
- **Built robust CI/CD pipelines and containerized services using Docker and Kubernetes**, accelerating deployment cycles, and enabling consistent environments across development, staging, and production.
- **Led backend performance optimization and system hardening**, improving throughput, reducing latency, strengthening observability, and increasing overall platform stability under heavy workloads.

Seeq

FullStack Developer

Oct. 2022 – Sep. 2023
Remote | San Francisco, CA

- **Implemented and enhanced complex user interfaces** in a modern SaaS analytics platform using **React, TypeScript, and responsive design**, delivering interactive visualizations for time series data and analytics workflows used by industrial customers worldwide.
- **Collaborated closely with product, backend, and design teams** to translate requirements into performant, scalable frontend features, ensuring consistency with UX/UI specifications and real-world workflows for process engineers and data scientists.
- **Optimized frontend performance and client-side state management**, improving application responsiveness and load times across data-intensive dashboards and interactive components, resulting in measurable user experience gains.
- **Maintained high code quality and developer velocity** through comprehensive **unit and integration testing**, code reviews, and continuous integration practices that aligned with the teams agile development process.

Lingoberry

Software Engineering Intern

Aug. 2020 – Oct. 2022
Tehran, Iran

- **Developed production features across both frontend and backend** using **Next.js, React, TypeScript, NestJS, GraphQL, and PostgreSQL**, contributing to user-facing functionality and core business logic.
- **Built modern, responsive UI components** with **Material UI, Mantine, Styled-Components, and Sass**, implementing complex forms, dashboards, animations, and interactive visualizations using **Chart.js, Framer Motion, and Lottie**.
- **Integrated frontend applications with GraphQL APIs**, handling authentication, data fetching, client-side state management with **Zustand**, and improving UX through optimized loading states and error handling.
- **Implemented backend endpoints and services** in NestJS, working with database models, validations, authentication (JWT, Passport), and business workflows under the guidance of senior engineers.
- **Participated in code reviews, testing, and debugging sessions**, gaining experience with production-grade development practices, Git workflows, and collaborative software delivery.

EDUCATION

University of Tehran

Mechanical Engineering

Sep 2019 – Feb 2022
No degree

SKILLS

Languages : TypeScript, JavaScript, HTML5/CSS3, SQL (PostgreSQL, MySQL)

Frameworks / Libraries : Node.js, Express, NestJS, React.js, Next.js, Vue.js, Three.js, GraphQL, Apollo Client

Cloud / DevOps : AWS (EKS, EC2, S3, Lambda), Docker, Kubernetes, CI/CD
